

ABSTRACT

The application discloses an apparatus including at least one sensor configured to monitor environmental conditions ambient to rack mounted computer equipment and a housing configured for mounting to an equipment rack. The housing includes a processor responsive to the sensor, at least one network interface responsive to the processor and configured for communication with a distributed computing network, a web server configured to provide a web page associated with information derived from the sensor, an email module configured to send notification of events associated with the sensor, and a simple network management protocol module configured to communicate with computer equipment external to the housing.
